What?

The Summer Technology Camp is an opportunity for students to expand their technology skills by applying them to real life applications. Students attending the camp will:
- Use LEGO components to build machines to perform specific tasks and use computers to control the machines they build.
- Explore math, science and technology related concepts using the machines they build.
- Develop a portfolio of their projects completed in the technology camp showing pictures and videos of their machines in action.

This will be a great experience for students with beginning to advanced technology skills. We provide advanced activities for students who have previously attended Tech Camp.
