FEA Cost Proposal:  Question and Answer

The proposal with FEA (Facility Engineering Associates) was $61,680 – was that the final cost?  Where did the money come from to fund it?

The $61,680 proposal from FEA came from unspent FY2013 funds.  An additional contract for $12,900 for additional school transportation considerations outside of the original scope of contractual work performed by FEA was awarded and performed by School Bus Consultants.  These additional considerations provided critical transportation elements to the overall study and will be invaluable as we move forward.  The School Bus Consultants will assist with a redraw of district boundaries with an emphasis on effective routing and cost containment.  These additional contractual costs will be paid from the Operations contracted services budget in FY2014.
